Python Pi Challenge
Digital Thermometer

The Pi Challenges

No code provided for you this time! Can you figure out how to write it yourself?

Our electronics kit has a "DS18B20 Temperature sensor module with cable" and a "Blue 1602 LCD". Put them together to create a device that will give a digital readout of the temperature.

Hints

Check out the tutorial on adafruit.com to find out how to wire up the sensor (search adafruit for DS18B20).
